16 oz RTU Non-Toxic Alternatives to Harsh Chemicals that

Really Work !!!

12 bottles to a case, 60 cases to a pallet, PPD on full pallets, mixed cases OK.
EDI capabilities.

(805) 927-7500 :: www.pharmsolutions.com :: Port Townsend, WA

For 2007- The Hardware Line.

There has been consistent demand for a smaller size of our 2005 Award Winning Organic Pesticides. One that fits neatly on a hardware store shelf and still provides your customers with a proven alternative to harsh chemicals.

Deer Pharm :: The first deer repellent made from Certified Organic Oils, the Deer Pharm will delight you with amazing results! We've seen flowers for the first time on bushes that were planted 8 years ago. Deer really hate this concoction. Please spray in the evening when you are about to go in for the day. The aroma will dissipate to humans overnight but remains very real for the deer. Spray frequently in the early season, moving applications further apart as the season progresses. If the deer return, increase again for a short time.

Patent Pending

Weed Pharm :: Finally ! A natural, non-toxic, bio-degradable, non-selective weed and grass killer that will not hurt the environment! University trials that prove 20% Acetic Acid is as effective as Glyphosate in killing annual and broadleaf weeds with one application, (perennial weeds may require a second application) and weeds cannot build a resistance to the product as the acetic acid strips the leaves of their waxy coating

preventing the collection of moisture and light. You will see results in a just a few hours. Please read label directions carefully.

Garlic Pharm :: Organic farmers have used garlic extract to repel insects from crops for many years. We have added potassium bicarbonate as a buffer. Used in between applications of our insecticidal soaps, Garlic Pharm will repel aphids, thrips, white fly, cucumber beetles, spider mites, and aid in the control of rust, mildews, and fungi. Use freely on herbs, edibles and veggies up until harvest. The garlic fragrance will dissipate rapidly to humans but linger for insects and small critters. Please test first on ornamentals. For best results, water well in the a.m., Then at dusk

spray a fine even mist. Not intended for indoor use.

Patent Pending

Veggie Pharm :: Tired of rabbits? To the formulations of Rose Pharm we have added a full ounce of pure food grade garlic extract as a repellent to insects, worms, and small mammals. The fragrance will dissipate rapidly to humans yet linger for insects and critters. For best results, water well in the a.m. At dusk, spray a fine even mist on plants, vegetables and fruit. Do not over spray. Use freely until harvest. Please test first on ornamentals. We are told by a well known horticulturalist, Veggie

Pharm kills adult Japanese Beetles on contact.

Patent Pending

Rose Pharm :: Amazingly, pure peppermint oil scrambles the senses of insects, leaving them disoriented, unable to breed, feed or breathe. We have actually seen aphids land on treated rose buds, scramble around for 15 minutes and fly away! Add to that, pure cottonseed oil as a miticide and potassium bicarbonate as an organic buffer. Please test first on ornamentals for best results, water well in the a.m. Then at dusk, spray a fine even mist on leaves top and bottom canes and (if you have blackspot) the base of the rose. Do not over spray.

Patent Pending

Indoor Pharm :: We chose Organic Almond Oil for our interior product for its delicate and pleasant fragrance. Food grade oils smother scale, thrips, aphids, mealybugs, fungus-gnats, white fly, spider mites, and so much more. Used twice monthly, Indoor Pharm will control mildews and fungus of all types. Please spray at dusk to avoid sunlight and lengthen drying time. Use freely on herbs and edibles up until harvest. You will be amazed! A large grower of houseplants has completely eradicated scale in

their greenhouses by using Indoor Pharm regularly.

Patent Pending

Fish Pharm :: This fermented salmon byproduct foliar fertilizer will delight you with results. No need for messy mixing here! Liberally spray this ready to use plant food on leaves. The good news? Fish Pharm also contains potassium bicarbonate as a buffer. Used in combination with our other products, Fish Pharm will aid in the control of blackspot, powdery mildew and rust. Please test first on ornamentals. For best results, water well in the a.m., Then spray at dusk. Use freely on herbs, edibles and veggies

up until harvest. Not intended for indoor use or in bear country.

Patent Pending

Fungus Pharm :: Made with Certified Organic Soybean Oil, the Fungus Pharm does a great job when used weekly to prevent Powdery Mildew, control Rusts, Blackspot and more. Please water plants to be treated in the AM, then at dusk, spray a fine even mist on the stems, leaves top and bottom. Spraying in the evening lengthens drying time allows the oils to penetrate the cell wall of the fungus and break it down. Please read label

directions carefully.

Patent Pending

Flower Pharm :: For years pure cinnamon oil has been known to have exceptional pesticidal properties. Combined with potassium bicarbonate as a buffer in Flower Pharm, we have seen hollyhock rust, geranium rust and snapdragon rust eradicated while controlling garden pests and disease. Pure cottonseed oil is the miticide. Please test first on ornamentals. For best results, water well in the a.m., Then at dusk spray a fine even mist on plants, avoiding

blooms. A well known Floridian grower of orchids has eradicated Orchid Mites in their greenhouses using Flower Pharm.

Patent Pending

Only certified organic oils, food or pharmaceutical grade ingredients are used in our product offerings. Our four insecticidal soaps are each specially formulated for the specific end use. Don't let the fact that they all accomplish the same result lead you to believe that they are interchangeable because strictly speaking, they are not. EPA deregulated pure essential oils are our insecticides and they will control on contact, most garden pests. Our miticide is food grade cottonseed oil, and non GMO canola oil also deregulated by th EPA for its safety factor. Cottonseed Oil is known for its fungicidal properties and combined with our other ingredients creates a synergistic effect that works on powdery mildew, blackspot, rust, and fungus. You will be absolutely amazed to see the end of scale as well! Our sticker (or carrier) is food grade oleic acid and water, with some pure vitamin E and rosemary oil as preservatives.

Oil Pharm RTU :: For years we have had little choice in Horticultural Oils, the large majority being Petroleum based (paraffinic) oils for dilution. We have developed a new Summer/Winter Oil for use on Fruit Trees, Vines, Shrubs and Woody Ornamentals that is made from Certified Organic Soybean Oil and Certified Organic Soap (as a sticker) to help maintain zero toxicity in your home and garden space. Oil Pharm Ready-to-Use is designed for summer use. Please see our Oil Pharm Concentrate for winter use.

Patent Pending

Oil Pharm Concentrate :: For larger applications, we offer a new Summer/Winter Oil for use on Fruit Trees, Vines, Shrubs and Woody Ornamentals that is made from Certified Organic Soybean Oil and Certified Organic Soap (as a sticker) to help maintain zero toxicity in your home and garden space. Oil Pharm Concentrate is designed for winter or summer use. Dilute according to label directions to protect your trees, vines, shrubs and woody ornamentals from over wintering pests. Patent Pending

Patent Pending

There is a very clear emerging trend both toward gardening and growing organically, as well as an increasing preference for consumption of food products grown organically. Many, if not most, of us can be easily confused when it comes to the claim ORGANIC that appear on so many products these days. Clearly, ORGANICS are the future and Pharm Solutions will continue to provide superior, effective, non-hazardous products that will combat virtually all the challenges we face during the growing season. Mildews, Molds, Rusts and Blackspot; Insect Pests; Weeds and Grasses; overwintering Eggs and Larvae, all fall within our scope.

We hope you will use these products in good health and enjoy the season to come, with abundance.
